

# PARTNER FIBRE BROADBAND.

## PRODUCT SHEET

### Say hello to the fastest mass-market download and upload speeds available throughout the UK

Give your customers access to the UK's next generation Fibre network, offering faster download and upload speeds, reliable connectivity and consistently better performance than a standard ADSL broadband connection. Faster speeds and greater reliability mean you can set your customers up to take advantage of additional products such as VoIP, all at a competitive price tag.

### FTTC Vs. FTTP.

We offer two types of fibre broadband, FTTC (Fibre to the Cabinet) or FTTP (Fibre to the Premises). Availability of each is dependent on where your premises are located as, where available, only one option is present at each location.

FTTC delivers broadband into a property over the End Users' copper telephone line, whereas FTTP is a full-fibre service, FTTC uses fibre to deliver the service to a local cabinet, and copper for the 'last mile' of the service from the cabinet to the property. FTTC provides a cost-effective option whilst still delivering fast, reliable speeds and FTTP provides businesses with a consistent service at an ultrafast speed.

## KEY FEATURES.

Multiple data options available

12-month minimum contract

Up to 80Mb download, 20Mb upload

Fibre to the Cabinet (FTTC) or Fibre to the Premises (FTTP) options

Fast speeds, greater reliability

UK-based support

## HOW IT WILL BENEFIT YOUR BUSINESS?

### Increased speed and reliability

Up to 80Mb download and 20Mb upload speeds, whether using FTTC or FTTP – perfect for hosted server access or cloud.

### Host multiple users

Large enough bandwidth to cater for multiple users simultaneously, with multiple free static IP addresses included as standard.

### Enhanced control

Personalised access to your own connection management portal. View real-time diagnostics, bandwidth allocation and bill maintenance.

### Improved performance

Ideal for supporting high-bandwidth applications such as video, VoIP and large data transfers. Access and run business critical applications more effectively.

## HOW IT WILL BENEFIT YOUR CUSTOMERS?

### Increased speed and reliability
