

DATA SHEET

MPF BROADBAND

Take advantage of our cost effective MPF broadband solution, offering wide availability and up to 80Mb download speeds in some areas. By utilising existing copper phone cables, MPF broadband is not affected by the 2025 PSTN switch off, making it the ideal solution for customers unable or not ready to move to an FTTP service.

QUICK, EASY TO SET UP AND WIDELY AVAILABLE

MPF broadband is provided without a traditional voice service, so the existing copper cable can be connected directly to unbundled exchange broadband equipment. This means it has a fast set-up and is widely available.

Where Fibre to the Cabinet (FTTC) infrastructure is available, MPF broadband is available at speeds of up to 80Mbps in some areas.

With MPF broadband using existing copper telephone cables already in the ground to deliver traditional DSL services and FTTC services, it does not include the WLR voice line that is being discontinued. If customers want to add voice, they can add a new voice line from our “over the top” PSTN replacement IP voice service, Nasstar Talk.

PSTN SWITCH OFF

Openreach Wholesale Line Rental (WLR), the traditional PSTN voice service, is now end of sale and due to be fully switched off in 2025. That also spells the end for services that run over WLR, such as ADSL Broadband and FTTC broadband.

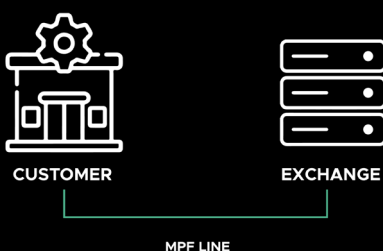

Whilst SOGEA (Single Order Generic Ethernet Access) offers a transitional copper-based service until Fibre to the Premises (FTTP) broadband is more widely available, it’s not yet available everywhere.

HOW DOES MPF BROADBAND WORK?

MPF broadband works in much the same way as traditional ADSL and FTTC broadband. However, instead of sharing the copper telephone line with an analogue voice service that charges the customer for the line rental, the line rental is wrapped into the cost of the MPF service.

As there is no analogue voice service, there is no dependency on the PSTN equipment that Openreach will be switching off in 2025. This means the MPF service can run directly from unbundled exchange equipment.

MPF DATA ONLY

MPF FTTC

BANDWIDTH OPTIONS

| Service | Download | Upload |
|---------------|---------------|----------------|
| MPF Data Only | Up to 24 Mbps | Up to 512 Kbps |
| MPF 40:10 | Up to 40 Mbps | Up to 10 Mbps |
| MPF 80:20 | Up to 80 Mbps | Up to 20 Mbps |

KEY FEATURES

- 

Wide availability
- 

Up to 80Mb download, 20Mb upload in some areas
- 

Not affected by PSTN switch off
- 

Unlimited data
- 

Installed on existing copper telephone lines
- 

12-month minimum contract

HOW IT WILL BENEFIT YOUR CUSTOMERS

UNLIMITED DATA

Businesses will have all the data they need to meet their requirements with no extra fees or usage caps to worry about.

VIALE INTERIM SOLUTION

MPF broadband bridges the gap until FTTP broadband services are more widely available, meaning those customers unable to switch to FTTP have a viable solution until they can change.

DATA ONLY SERVICE

There is no need for a separate line rental for a telephone service your customers don't need which saves on costs and set up time.

QUICK AND EASY TO INSTALL

Customers can get up and running quickly as the service is installed on existing copper telephone lines, with no need for additional infrastructure and associated costs.

REASONABLE SPEEDS

In some areas where FTTC infrastructure is available, some customers can get up to 80Mb download speeds and 20Mb upload speeds.

NO LONG COMMITMENTS

MPF broadband is offered on a 12-month minimum contract, meaning your customers do not need to be tied in for a lengthy period and can move to an FTTP service more quickly once it's available.

WHY CHOOSE NASSTAR CHANNEL?

Everything you need for you and your customers, right there in black and white

We remove the complexity and keep it simple. Our MPF broadband solution meets the needs of your customers and provides unrivalled support and experience that you can't get anywhere else.

// Established provider with years of experience

// Highly trained UK-based service and support team

// Access to the best expertise and resources

// Tried and tested, innovative products that deliver when you need them to

// Fully flexible options

// Simple on-boarding process

// Dedicated partner portal

// Full commitment and dedication to the Channel and its needs

Passionate people

Innovative technology

Exceptional experience

Channel-centric

Straightforward solutions

WHAT OUR PARTNERS SAY

Nasstar Channel stands out from the other partners we've worked with, due to the support channels, superb account management team and the great portfolio of products and services.

As a long-standing partner, we have confidence in Nasstar Channel network and support, which allows us to take on new business, knowing they won't let us down.
